

Appendix C

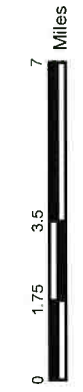

Support Maps

This appendix contains support maps for the watershed project plan. It includes urban floodplain maps that minimally display the 100-year and 500-year frequency flood limits and depth, breach impact areas, recreation development maps and other informational maps.

Appendix D

Investigations and Analyses Report

The purpose of the investigations and analyses report is to present information that supports the formulation, evaluation, and conclusions of the watershed plan. The report is required for all plans and must be included as an appendix. The report is organized under appropriate headings, such as project formulation, cost allocation, engineering, biology, hydrology, geology, land use, water quality, economics, or cultural resources. The procedures, techniques, assumptions, and the scope and intensity of the investigations for each subject must be described in sufficient detail so that a reader not familiar with the watershed or its problems can form an opinion on the adequacy of the plan. This report supplements information contained in the plan; it does not replace or duplicate such information.

This will be developed for later review points.

Appendix E

Other Supporting Information

This section, rather than the body of the document, is used if tabular or other supporting data are needed to make a point. If material incorporated by reference needs further explanation, this section can expand on the discussion provided in the main body of the plan's text.

This section will be amended as part of future review points.

Supporting Information as part of Review Point No. 3:
